DETAILED ACTION

Allowable Subject Matter

Claims 1-30 are allowed.

The following is an examiner's statement of reasons for allowance:

In regards to the independent claims, the prior art of record fails to anticipate or rendered obvious the combined elements/steps of, "a trigger expiration time that prevents accessing said trigger after an expiration time", in conjunction with the element/steps of, "enabling the resource to be accessed after the trigger expiration time", as recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Blackketter teaches a system that transmits ATVEF triggers to a client device, wherein the ATVEF triggers contain life span attributes that define a start and end time. Blackketter fails to teach accessing the resource (URL information contained in the ATVEF trigger) after a trigger expiration time. The specification clearly teaches that when an ATVEF trigger is received with a television program that is recorded by a client device that the trigger expiration time is contained within the ATVEF trigger and if a person accesses the resource before the trigger expiration time, the trigger expiration time is removed and the trigger along with the resource are stored and therefore a user who has recorded the television program can continually access the trigger's resource if
